

# Stringent security requirements

The County of North Jutland has one of Denmark's most extensive mobile solutions. More than 1500 doctors and administrative staff have received a PDA, which use Afaria from Sybase to centrally administer security, backup and software updates.

**"Mobility has become a necessity.** As a doctor, I am constantly on the move from floor to floor. From hospital to hospital. The mobile solution means that, wherever I am, I can use my PDA to view information such as patient data, digital documentation, clinical guidelines, and x-rays."

**"The IT department uses a central team to handle security and backup.** If I lose my PDA, they can lock it immediately, save all my data and recreate it a few minutes later on a new PDA."

**"A mobile solution gives me freedom,** security and more time in a busy working day."

## Want to know more about mobile solutions?

HandStep works together with Sybase, producers of 'Afaria', a mobile unit administration system. IDG named Afaria "Mobility Product of the Year" in 2004. Read more on [www.handstep.com](http://www.handstep.com) or contact us on +45 30 38 90 00.

HandStep is the leading developer of mobile solutions which improve effectiveness and customer service. We replace manual, paper based working procedures with electronic and integrated processes. [www.handstep.com](http://www.handstep.com)
